

KV6014 Log Task 1

Northumbria
University
NEWCASTLE

<i>Released</i>	Oct 5, 2026
<i>Submission</i>	Blackboard 5pm Oct 16, 2026

Log Task Overview

You have been asked by your client to provide them with a clear plan for how you intend to meet their challenge.

Each person needs to complete the relevant aspect ready for submission as a team to blackboard.

The completed plan should be submitted in a .zip folder and uploaded one per team to blackboard by the deadline.

Log Requirements

<i>Task</i>	<i>Deliverable</i>	<i>Owner</i>
Outline your plan (see below for details)	Completed plan in an agile format.	@Project Manager
Outline the intended features for your project.	Completed plan for your features.	@Developer(s)
Outline the intended UX design features for your project.	Wireframe sketches of the project.	@Designer(s)
Identify the security risks for your project.	Risk assessment for your project.	@CyberConsultant

The deliverables can be provided in any sensible format - make sure that the format chosen will help you as a team when it comes to planning and executing your final project.

@Project Manager

Completed plan in an agile format - this should clearly show your intended plan for your project.

It should include:

1. **An epic** that states what the overall aim of your project is. This should include details of what the challenge is, who the intended audience is, and what you are creating in response. One suggested format is included in the notes at the end of this document.
2. **User Stories** (8-10) that are used to outline features from the user perspective. Again, see the notes for suggested formats (page 3).
3. **Story mapping** that shows how the user stories will ensure the overall project is completed. See notes for more details (page 3).

@Developer(s)

Completed plan for your features - this should demonstrate what your plan is for the features of your project. You should include story splitting so that it is clear how you will 'chunk' the development. See the notes at the end of the document for more details (page 3).

@Designer(s)

Wireframe sketches of your project. - These should be provided in Figma, PowerPoint, or something similar. This should make it clear what the intended solution might offer from a user perspective.

@CyberConsultant

Completed risk assessment for your project. - this should clearly identify your risks (I would expect a minimum of 10) and you should assess the likelihood, impact, risk level, mitigation, and the responsible person. See notes (below) for more details.

Notes

The Epic @Project Manager

One suggested format for your epic is below (with examples). If this does not work for your project speak to your supervisor about how you might best represent this.

For:

Who:

Our:

Is a:

That:

<u>Examples:</u>	
For: [The user group] Who: [Problem / challenge] Our: [Type of system] Is a: [Outline project idea] That: [How it meets the challenge]	For Northumbria students Who need to find good coffee Our mobile app Is a good coffee finder That will show students ratings and locations.

<u>Examples:</u>	
For: [The user group] Who: [Problem / challenge] Our: [Type of system] Is a: [Outline project idea] That: [How it meets the challenge]	For Northumbria students Who want team building activities Our game Is a hybrid escape room That will require working together (one online and one physically in person) to escape.

User Stories: @Project Manager

These should be in the format:

As a [persona], I [want to], [so that].

e.g. As a manager, I want to be able to understand my colleagues progress, so I can better report our successes and failures.

e.g. As a player, I want to be able to understand how much progress my teammates have made, so we can better complete the puzzles.

Story Mapping @Project Manager

This should arrange your user stories into the fundamental steps of the user journey (what activities will they need to do and when).

A completed map might look like this:

Story Splitting @Developer(s)

Each user story needs to be split into smaller stories so that it can be prioritised and turned into manageable development 'chunks'.

E.g. a user story that is 'as an administrator I want to publish content to our company intranet so I can keep employees updated' might be broken down into:

- Administrators need to be able to publish different types of content (videos, documents, text updates, etc.)
- Administrators need to be able to schedule content to publish
- Administrators need to be able to preview published content
- Administrators need to be able to collaborate on content

E.g. a user story that is I want to be able to understand my teammates progress might be broken down into:

- Players need a way to 'report' their progress
- Players need a way to 'see' teammates progress
- Players need a way to ask for updates
- Players need a way to be able to respond to updates

Features @Developer(s)

The main features of the system should be outlined clearly (in a format that makes sense to you, and you can explain clearly.

Intended Solution @Developer(s)

A brief overview of the tools and technical solution to the challenge

Risk Assessment @CyberConsultant

Security Risk	Likelihood	Impact	Risk Level	Mitigation	Responsible person
E.g. Weak passwords for login	Medium	High	High	Require 8+ characters	Developer
